

the
**BENEFITS of
SOLAR
ENERGY**

2 Solar is
Clean Energy

It generates power without greenhouse gasses (CO2) or other pollution, so it's good for the environment.

Solar panels, also called modules, work by capturing the UV rays and converting them to electricity.

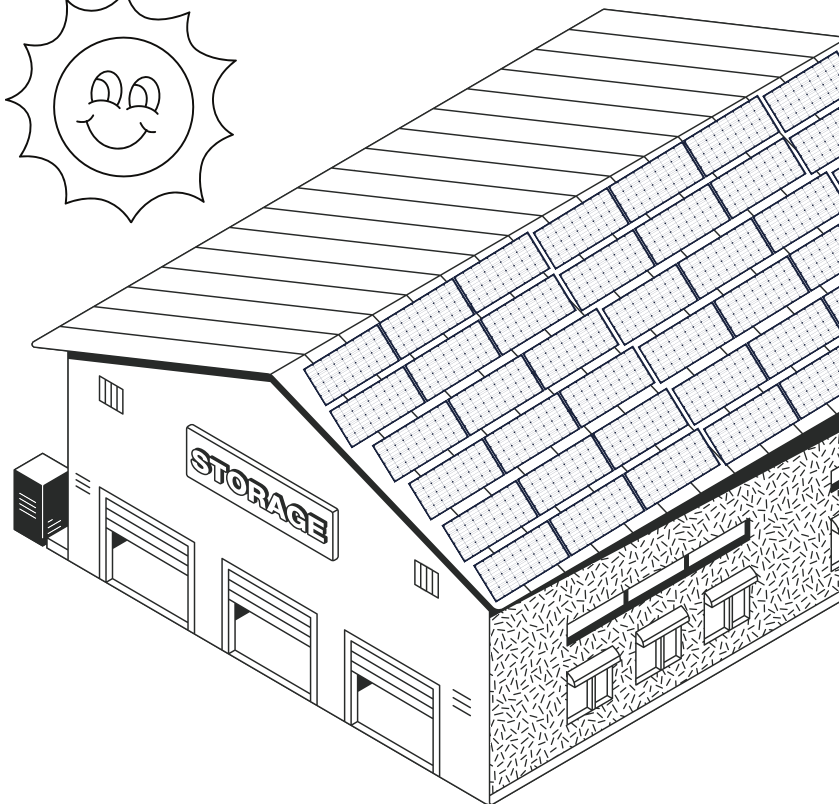

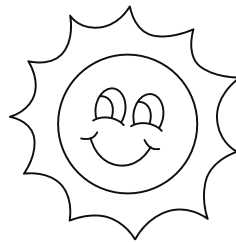

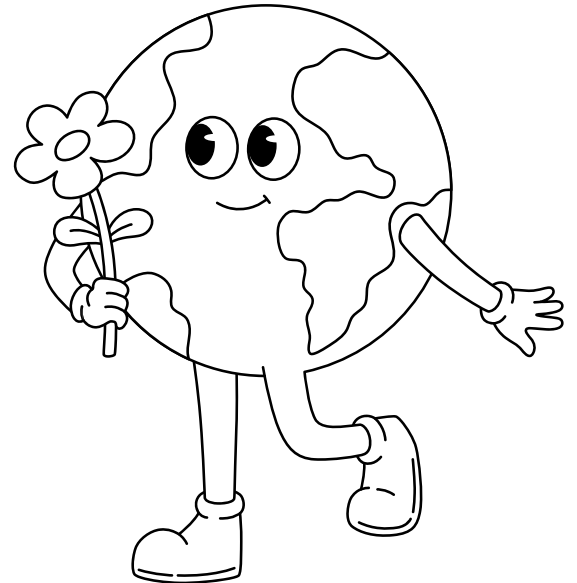

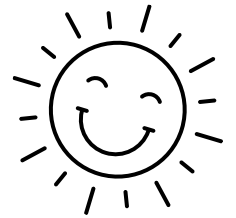

Solar can be installed on homes, schools, large buildings, in fields, and even on water!

The energy is sent through power lines to homes, schools & businesses.

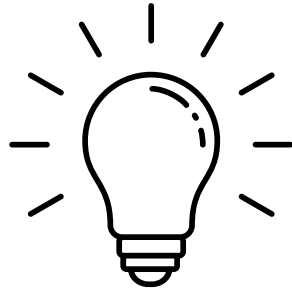

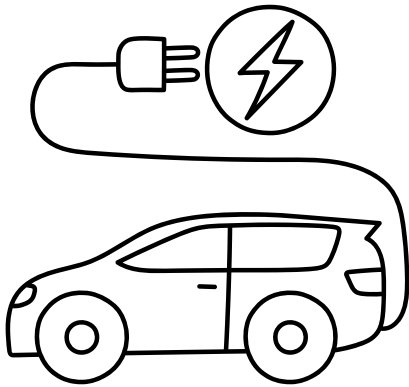

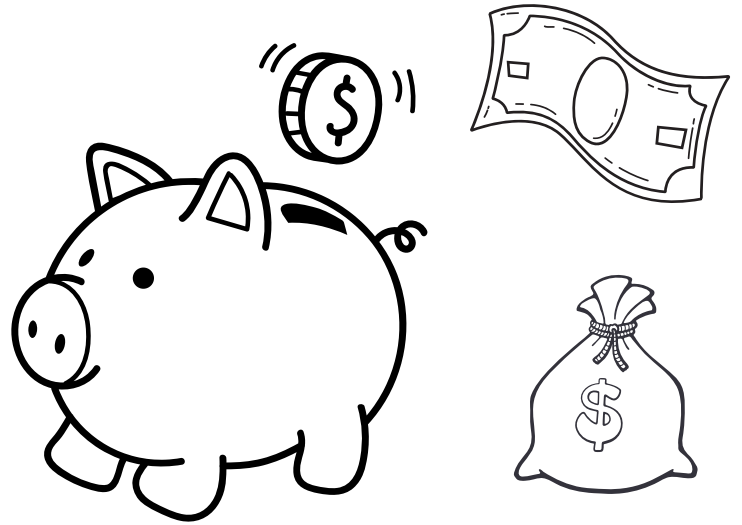

1 Solar is
Renewable

It's naturally replenished (each day) and can be used over and over without running out.

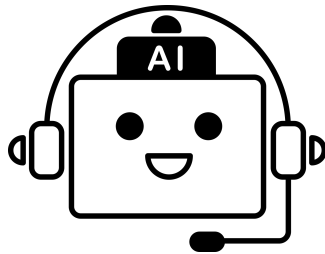

3 Solar Saves Money

Solar energy is less expensive than fossil fuels like coal or oil, resulting in lower electricity bills for people & businesses.

4 Solar Powers Technology

Think about all the electricity we need for new technology, electric cars, heating & air conditioning, and household appliances.

5 Solar Creates Jobs

The solar industry is expected to create an additional 600,000 jobs in the US over the next 5 years.
